Cc: Dirks, Rita

Dear Federica,

Unfortunately we have a problem using the functionality to exclude cases without microarray data while executing a search on clinical features. We are working on a new version of the ECARUCA database to solve these problems and to introduce new functionalities. We hope to get on-line at the end of September this year.

However, I made a query directly in the database to search for the cases you are interested in. The result is 33 cases.

Would you please let me know what data you need so I can make a list. I understand you are doing research in our hospital. If you prefer, we can make an appointment so we can look into these cases directly and collect all data you need.

I am in the department (Genetica) next week on Monday, Tuesday and Thursday. The week after that I am on vacation, possibly for three weeks.

Furthermore we ask you to refer to the ECARUCA database in your publication, mentioning the site [www.ecaruca.net](http://www.ecaruca.net) and cite the article of Feenstra et al. 2006 Jul-Aug;49(4):279-91 which describes the database.

With kind regards,  
Rita
