

**Should we include also those patients who show bifid uvula  
(without other more severe forms of OFCs)?**

Patients recorded in Decipher database:

*Already  
recorded  
in my  
Excel file*

**260 patients affected by OFCs**

*CL [upper/lower]  
CLP  
CP [cleft soft palate, submucous cleft hard palate, cleft hard palate]  
Oral cleft [unspecified]  
Alveolar ridge cleft  
Mandible cleft  
Facial cleft [unspecified]*

**6 patients affected by OFCs + bifid uvula**

*Not  
included  
in the  
Excel file*

**29\* patients presenting bifid uvula** (*without cleft soft/hard palate, just a cleft uvula*)

(\*) Decipher patients affected by bifid uvula (only) are 30, but one (ID n. 849) is a 'no data' patient!
